Hi!

All the features planned for version 1 have been developed in version 0.9.5, except for number 7 and 8, so please find the new road map included beneath.

As usual please let us know if there are features that are more important than others that we must include in version 0.9.6.

1. Language file not available - Default to English language file instead of generating a PHP error.
2. Display number of PHP and SQL errors that have occurred during the last optional period (setting) in the administrators console.
3. Set variables or ensure that is_set checked
4. Overview profile - CC all emails to administrator with active overview profile
5. Award profile - Require approval from administrators before awarding RFQ
6. Location map (Google / Yahoo API)
7. Payment gateway (we will really appreciate help with this especially Paypal as SA companies / residents are not allowed to register as a merchant - Exchange control)
8. Add item to RFQ from RFQ profile
9. Access control module
10. User select branch when awarding (for accounting purposes) - if possible according to DB structure
11. Firefox search plug in (fix and improve)
12. Punchout solution to insert valid items (cXML)
13. Supplier / User information only displayed when RFQ awarded
14. Company admin - branch report option
15. Backup and purge emails sent / returned older than specific period

16. Send single email when multiple items or quotes updated simultaneously

17. Message field to send to user when all RFQ items removed during Admin approval

PRO

1. Display feedback response in RFQ profile

2. Outstanding feedback response profile and option to submit on line
